CALIFORNIA - AUGUST 1967

SPECIAL WEATHER SUMMARY

Temperatures were much above normal over the interior of the State, with some monthly departures of 5° to 7°. Only along the north and central coasts were average temperatures near or slightly below normal. Many new temperature records were set during the month. Some indication of the consistently warm conditions is given by the number of days during the month with below normal average temperatures: None at Sandberg, Bakersfield, and Sacramento City Office; only 1 day at Los Angeles Airport and Bishop; 2 days at Long Beach, Santa Maria, Sacramento, Blue Canyon, and Mt. Shasta; and 3 days at Fresno and Stockton.

Mt. Shasta reported the warmest August of record, the greatest number of days and the greatest number of consecutive days with temperatures of 90° or higher. Red Bluff had the warmest mean maximum temperature of record and set a new record with 23 days of 100° or higher. From June 23 through August 31 there have been 70 consecutive days of 90° or higher, and from June 14 through August 31 the average maximum temperature has been 99.2°. Sacramento airport reported the highest average temperature of any month of any name.

Stockton, too, had the warmest August of record, setting new maximum records on 5 days and new high minimum records on 7 days. The summer through August 31 has produced 26 days with temperature of 100° or higher, and 68 consecutive days of 90° or higher. Fresno experienced the second warmest August of record, and established a new mark with 24 days of 100° or higher. Bakersfield had 25 days of 100° or higher and the warmest August of record. Santa Maria had the second highest mean maximum temperature of record.

Los Angeles reported the warmest August and the warmest average temperature of any month in the city, setting new high minimum records on 8 days. At the airport it was the warmest August since 1959, and the maximum on the 31st was the warmest August reading in the last 12 years. At Long Beach the last 15 days of the month averaged more than 10° above normal. San Diego commented that the unusually high relative humidity emphasized the warm temperatures of the month.

Over most of the State precipitation was below normal. Blue Canyon and San Diego were the only first order stations reporting greater than normal amounts.

Hail was reported on the 8th in the Victorville area, but little damage resulted. Showers and thunderstorms on the 23d in Riverside, Los Angeles, and Orange Counties caused some damage to powerlines and temporarily closed highways. Lightning was responsible for damage in the San Diego County area on the 30th and 31st.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Environmental Science Services Administration State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you. Additional precipitation data are contained in 'HOURLY PRECIPITATION DATA CALIFORNIA' and 'Storage-Gage Precipitation Data for Western United States'.

DIMENSIONAL UNITS Unless otherwise indicated, dimensional units used in this bulletin are Temperature in F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F. In 'Supplemental Data' table directions entered in figures are tens of degrees. Resultant wind is the vector sum of wind directions and speeds divided by the number of observations.

OBSERVATION TIME The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4 00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6 00 a.m., P.S.T., and Mt. Shasta WB City at 8 00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the 'Evaporation and Wind' table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL. Entries of snowfall in the "Climatological Data" table, the 'Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES- Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office

SEASONAL TABLES Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground' table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.

+ And also on an earlier date or dates.

++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.

* Amount included in following measurement, time distribution unknown.

// Gage is equipped with a windshield.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing, if average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

T Trace, an amount too small to measure.

V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

AR This entry in time of observation column in Station Index means after rain.

C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in the 'Hourly Precipitation Data" bulletin. If daily amounts are published in "Climatological Data" bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the 'Hourly Precipitation Data' bulletin.

G "Soil Temperature" table.

H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and or snow on ground in that month.

J "Supplemental Data" table.

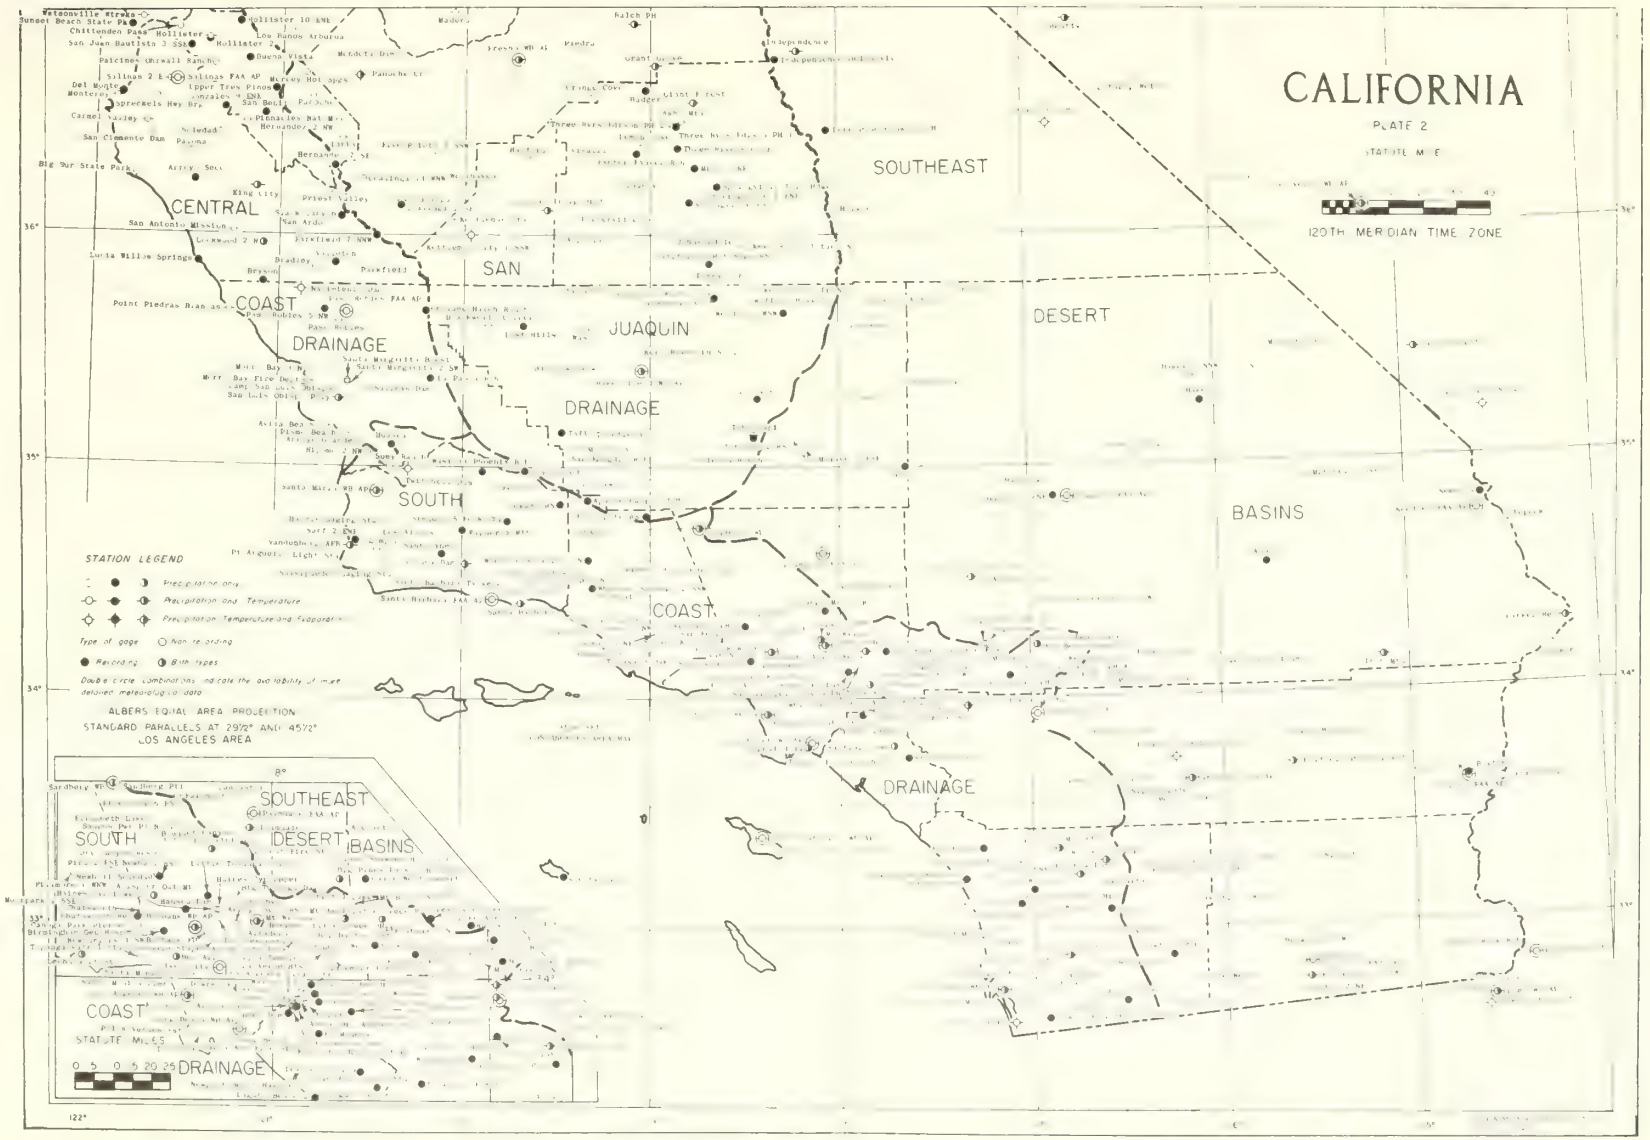
S Storage precipitation station. Precipitation measurements, made at irregular intervals will be published later in "Precipitation Data from Storage-Gage Stations" Bulletin.

SS This entry in time of observation column in Station Index means observation made near sunset.

VAR This entry in time of observation column in Station Index means variable.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.



General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price 20 cents per copy, monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

CALIFORNIA - SEPTEMBER 1967

SPECIAL WEATHER SUMMARY

The much above normal temperatures of the past 2 months continued into September. All regions but the extreme south coast and offshore islands, the desert, and the southern Sierras averaged at least 2° above normal, and the Los Angeles basin was near 4° above. Most of the Central Valley was 3° to 4° warmer than average, with only Red Bluff among the first order stations showing a departure of less than 2°. Many September temperature records were set: Fresno reported the highest average maximum since 1947, and the highest average temperature since 1932; Sacramento, the highest average since 1922; Stockton, the highest average minimum and average ever. Red Bluff had 46 days of 100° or more and an average maximum of 98.9° from June 14 to September 7, both of which were records for so long a period. Los Angeles set a new record of 78 consecutive days of 80° or more, and Long Beach had the highest average minimum and average temperatures, as well as the highest September minimum, 62°, ever recorded. In the northern mountains, Mount Shasta had the warmest September since 1953, and the number of days which reached 90° or higher from July through September was twice the average.

Along the immediate south and central coast it was foggier than usual, along with the higher than average minimums. At San Diego there was the least amount of possible sunshine for September since 1944.

Precipitation was above normal in all areas, but the floor of the Central Valley and in the coast range from Cape Mendocino to Point Sur.

On the 1st, lightning strikes damaged powerlines in the Los Angeles basin, and severe thunderstorms caused flash flooding in the Palm Desert area which damaged homes, businesses, and streets. On the 18th, lightning strikes damaged power poles in Kern County, and rain caused damage to alfalfa and grapes. A severe electrical storm on the 28th in the Los Angeles basin and surrounding areas started forest fires in three National Forests, struck and burned several homes, ruptured a chlorine tank whose escaping gas killed 2 and injured 73, and caused many power failures. Locally heavy rains and high winds created traffic hazards in which two were killed and many injured. The same storm damaged powerlines in the Coachella Valley, struck a home in Indio, and the heavy rains damaged the carrot crop near Palm Springs.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Environmental Science Services Administration State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you. Additional precipitation data are contained in "HOURLY PRECIPITATION DATA CALIFORNIA" and "Storage-Gage Precipitation Data for Western United States".

DIMENSIONAL UNITS Unless otherwise indicated, dimensional units used in this bulletin are Temperature in F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F. In "Supplemental Data" table directions entered in figures are tens of degrees. Resultant wind is the vector sum of wind directions and speeds divided by the number of observations.

OBSERVATION TIME The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4 00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6 00 a.m., P.S.T., and Mt. Shasta WB City at 8 00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office

SEASONAL TABLES: Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

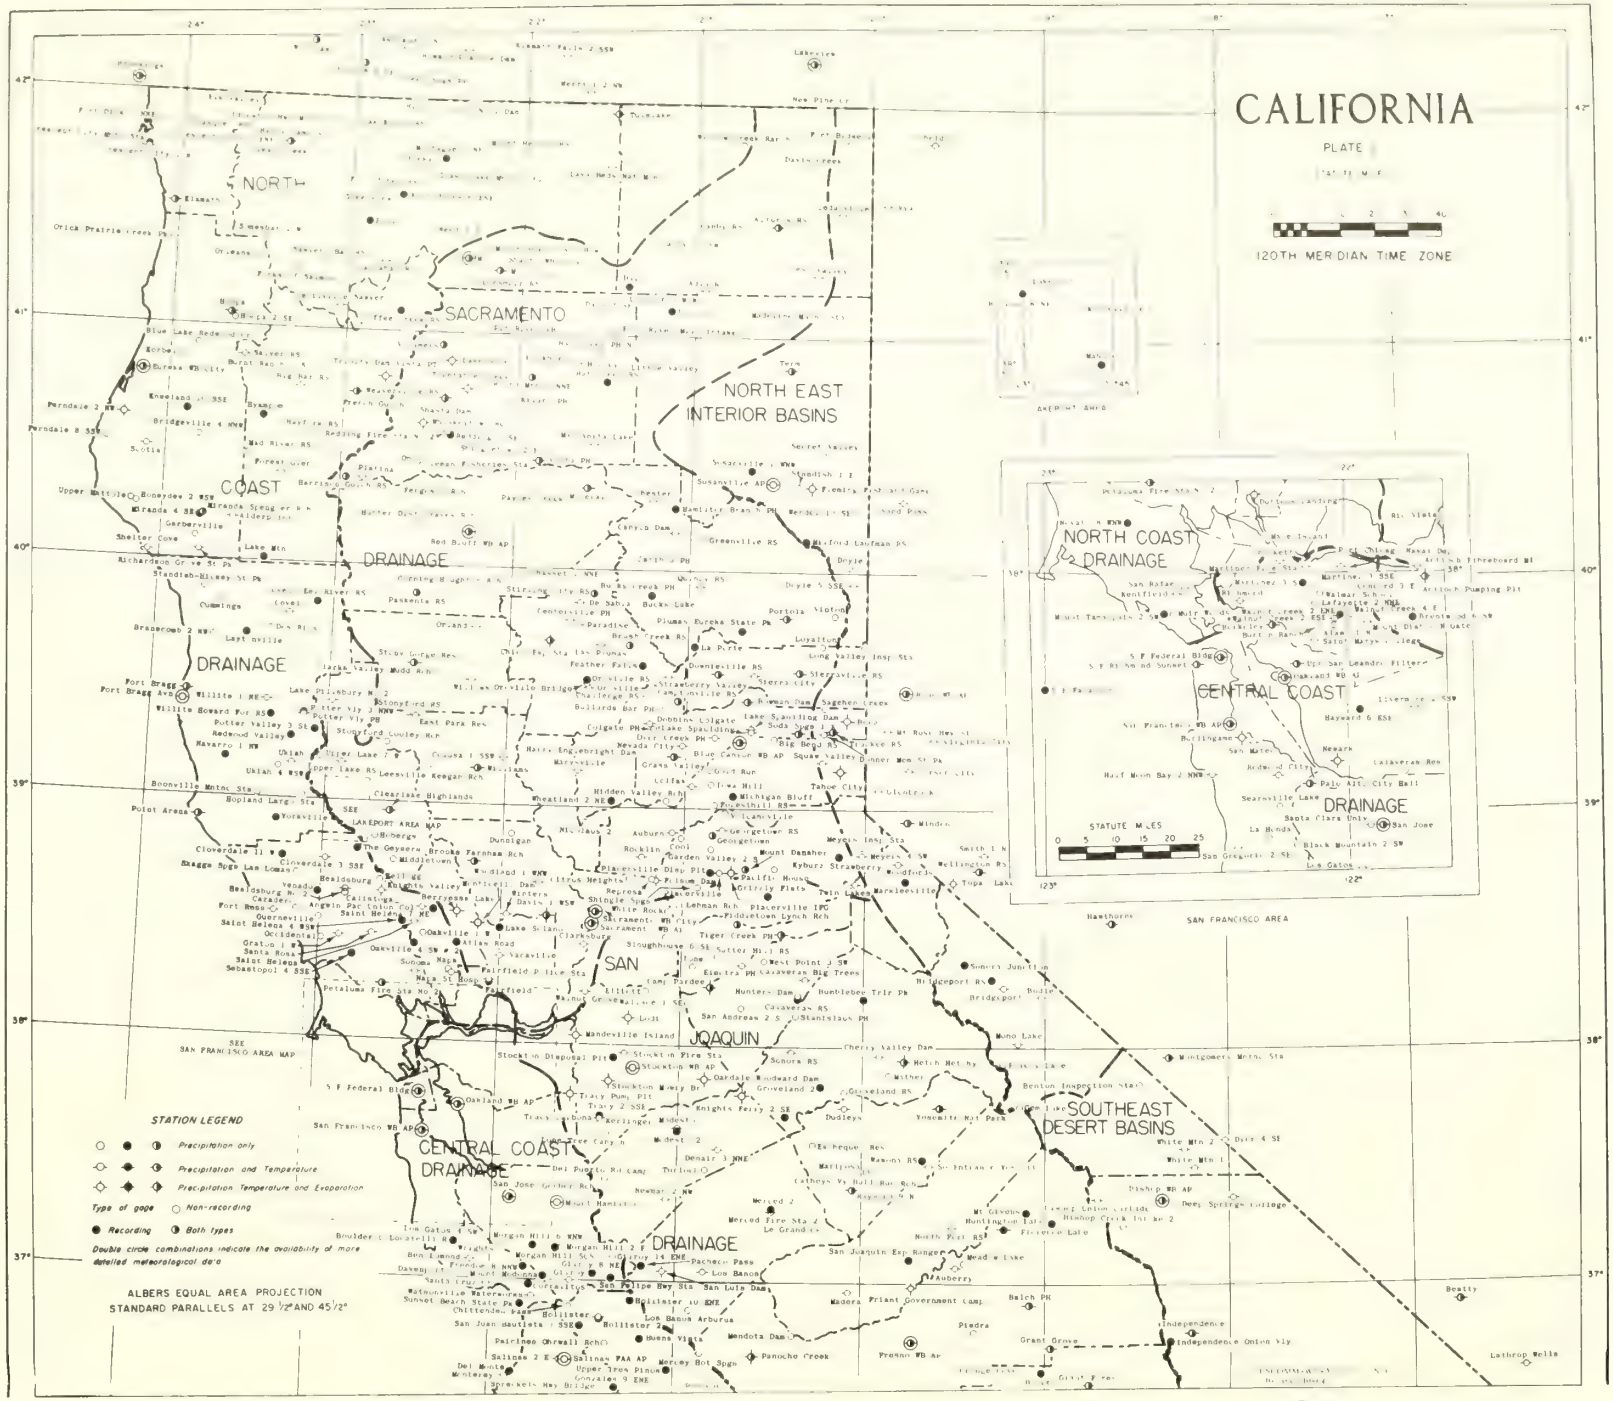
IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- \- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.
- \+ And also on an earlier date or dates.
- ++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing, if average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.
- V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- AR This entry in time of observation column in Station Index means after rain.
- C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in the "Hourly Precipitation Data" bulletin. If daily amounts are published in "Climatological Data" bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the "Hourly Precipitation Data" bulletin.
- G "Soil Temperature" table.
- H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
- J "Supplemental Data" table.
- S Storage precipitation station. Precipitation measurements, made at irregular intervals will be published later in "Precipitation Data from Storage-Gage Stations" Bulletin.
- SS This entry in time of observation column in Station Index means observation made near sunset.
- VAR This entry in time of observation column in Station Index means variable.
- \# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.



Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

CALIFORNIA - OCTOBER 1967

SPECIAL WEATHER SUMMARY

This was one of the warmest Octobers of record. Temperatures averaged several degrees above normal over the State, with the exception of a small area in the northern mountains. In most areas, this is the fourth consecutive month with above normal temperatures. The greatest positive departures occurred in the coastal sections, and especially in the Los Angeles basin and the San Francisco Bay region. Departures of 4° to 5° were observed in these areas.

Long Beach had the highest average maximum, minimum, and monthly temperatures for October since 1958; Sacramento, the eighth warmest October since 1877; San Francisco Airport, the second warmest of record; and downtown San Francisco, the highest average minimum and average monthly temperatures in 97 years of record. San Diego reported 86 percent of possible sunshine, which is the greatest amount since the record began in 1890. The percentage of possible sunshine was above average at other coastal locations also, but no new records were reported.

Precipitation was well below normal, as only one general storm moved through the State during the month, on the 2d and 3d. It caused moderate to heavy precipitation in the coastal regions north of Monterey Bay, and the first snow of the season in the northern Sierras. However, there was only light rain in the central valley, and there was none south of the Paso Robles-Fresno line. Other storms during the month caused precipitation only in the extreme north.

Gale-force winds on the 2d and 3d in northern and central California downed many powerlines, causing local power failures, damaged tree crops in the valley, and blew over trees and trailers in the mountains. A forest fire was started near Lake Tahoe by this storm. Strong Santa Ana conditions developed south of the Tehachapis on the 5th, 15th, and 28th, and the high winds and low humidities seriously hindered fire control operations, so that forest and brush fires burned out of control for a period of several days. Local strong southerly winds in the Cascades caused fire control problems on the 21st.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Environmental Science Services Administration State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you. Additional precipitation data are contained in "HOURLY PRECIPITATION DATA CALIFORNIA" and "Storage-Gage Precipitation Data for Western United States".

DIMENSIONAL UNITS Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F. In Supplemental Data table directions entered in figures are tens of degrees. Resultant wind is the vector sum of wind directions and speeds divided by the number of observations.

OBSERVATION TIME The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

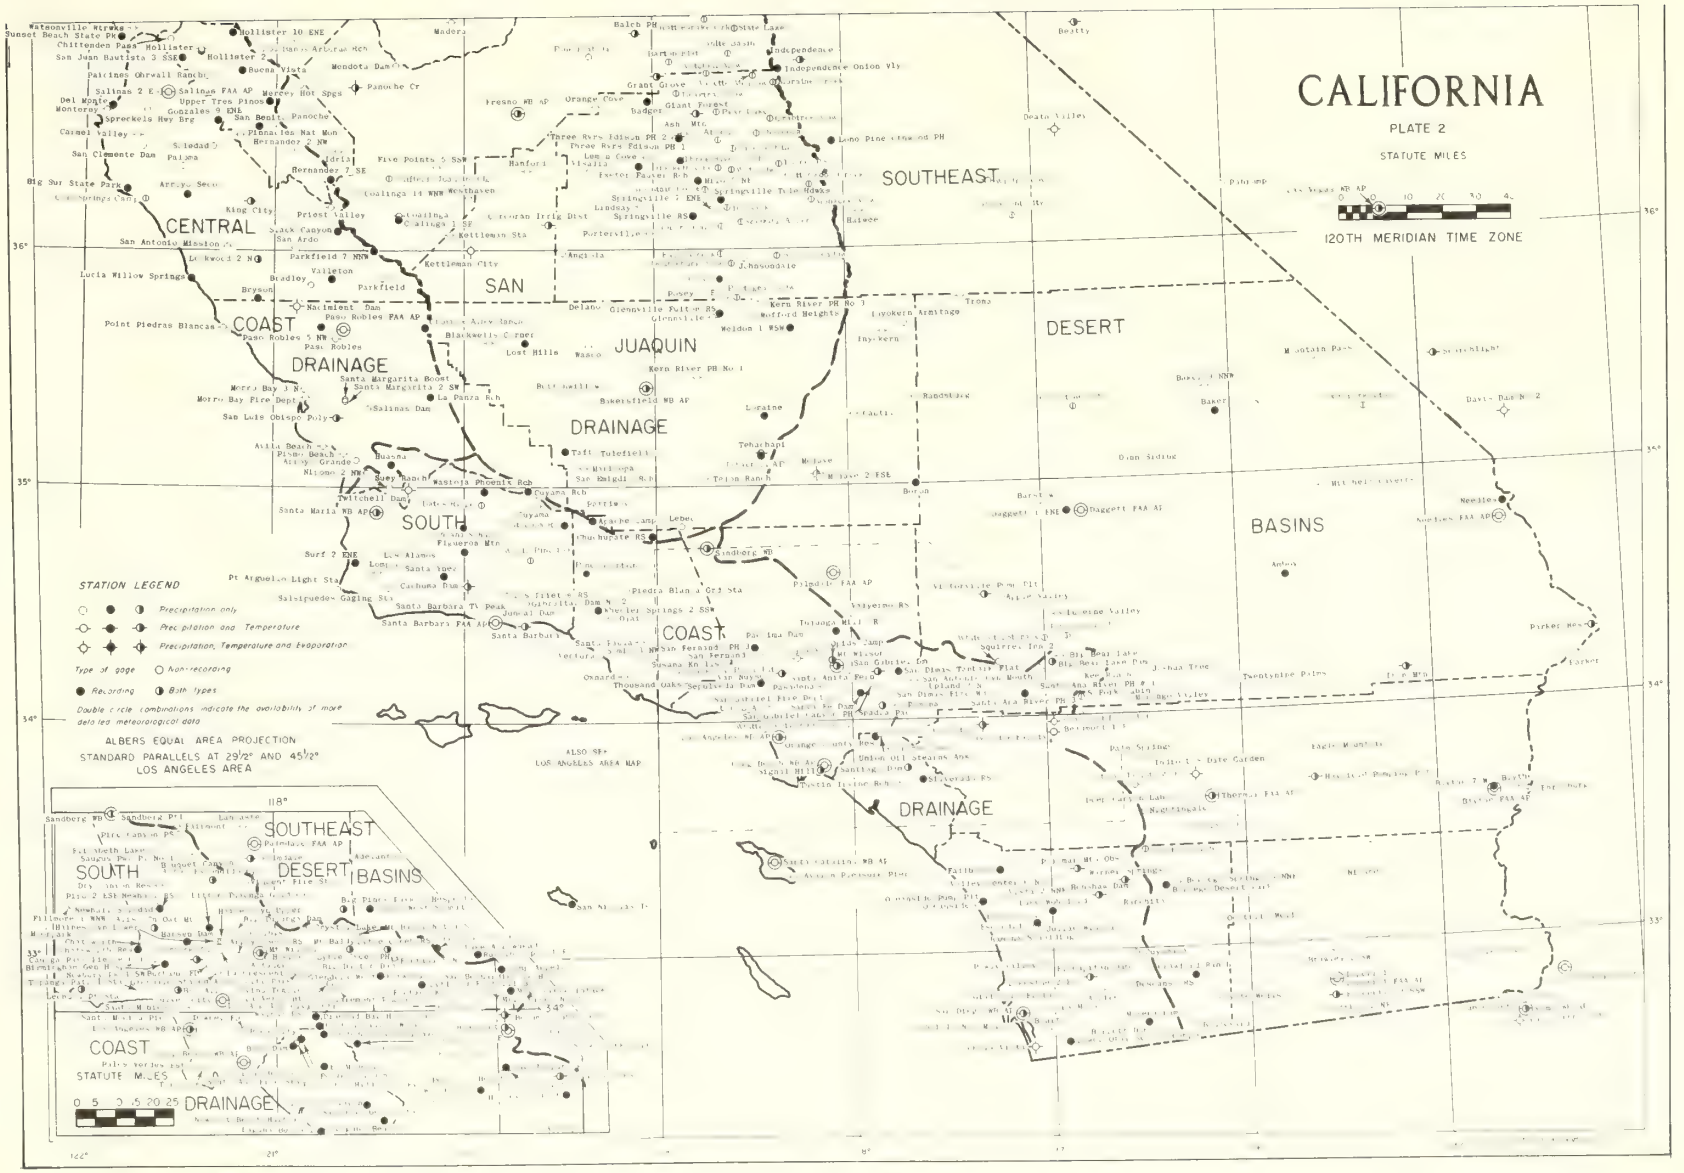
- – No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.
- \+ And also on an earlier date or dates.
- ++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.
- • Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing, if average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.
- V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- AR This entry in time of observation column in Station Index means after rain.
- C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in the "Hourly Precipitation Data" bulletin. If daily amounts are published in "Climatological Data" bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the "Hourly Precipitation Data" bulletin.
- G "Soil Temperature" table.
- H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
- J "Supplemental Data" table.
- S Storage precipitation station. Precipitation measurements, made at irregular intervals will be published later in "Precipitation Data from Storage-Gage Stations" Bulletin.
- SS This entry in time of observation column in Station Index means observation made near sunset.
- VAR This entry in time of observation column in Station Index means variable.
- \# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.



General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

CALIFORNIA - NOVEMBER 1967

SPECIAL WEATHER SUMMARY

Temperatures averaged well above normal over the entire State during November, with positive departures greater than 2° in most areas and in excess of 5° in some. A change to cooler weather occurred near the end of the month, but Bakersfield and Long Beach reported only 2 days during the entire month with mean temperatures below normal. Three such days were reported by Oakland, Bishop, Santa Maria, Los Angeles, and San Diego; and Red Bluff had only 4 days below normal. Sacramento reported the fifth warmest November and the second highest November maximum reading since records started in 1877. At Bakersfield, it was the warmest November since 1913; Long Beach was the warmest since records started in 1941; Mt. Shasta and San Diego were the warmest since 1949, Bishop since 1950, and Santa Maria since 1959. Santa Maria also had the second warmest average minimum of record. San Francisco set new November maximum temperature records on the 1st and 2d.

Precipitation was below normal over most of the area north of the Tehachapis, except for the San Joaquin Valley, but unusually heavy precipitation fell in the area to the south. Los Angeles reported the second wettest November of record; Long Beach had the second wettest since 1946; and San Diego had the third wettest since 1950. New records for hourly amounts and for 3-day totals were set in Los Angeles, and for 24-hour totals at Long Beach. Preliminary reports suggest that 4-day storm totals were around 14 inches at some mountain stations.

Severe lightning was experienced in northern and central California on the 18th, damaging a number of homes and power distribution systems and burning one store to the ground. Heavy rains from the 18th through the 21st in southern California resulted in flooding and mud slides, particularly in areas recently denuded by fires. One Boy Scout was buried in a mud slide and another was drowned in a mountain stream. Hundreds of campers were stranded when mountain roads were washed out. A waterspout was reported by a pilot flying northwest of San Nicolas Island on the 21st. Some structural damage to buildings, plate glass, and sign boards was reported in the Oakland-Livermore area on the 22d as a result of high winds.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Environmental Science Services Administration State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you. Additional precipitation data are contained in "HOURLY PRECIPITATION DATA CALIFORNIA" and "Storage-Gage Precipitation Data for Western United States".

DIMENSIONAL UNITS Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F. In 'Supplemental Data' table directions entered in figures are tens of degrees. Resultant wind is the vector sum of wind directions and speeds divided by the number of observations.

OBSERVATION TIME The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 5:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the 'Evaporation and Wind' table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- No record in the "Supplemental Data" table, 'Daily Precipitation' table, "Evaporation and Wind" table, Snowfall and Snow on Ground' table, and the Station Index.

  No record in the "Climatological Data" table and the 'Daily Temperature' table is indicated by no entry.

\+ And also on an earlier date or dates.

++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.

* Amount included in following measurement, time distribution unknown.

// Gage is equipped with a windshield.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See 'Daily Temperature' table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

T Trace, an amount too small to measure.

V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

AR This entry in time of observation column in Station Index means after rain.

C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in the 'Hourly Precipitation Data' bulletin. If daily amounts are published in 'Climatological Data' bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the 'Hourly Precipitation Data' bulletin.

G "Soil Temperature" table.

H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.

J "Supplemental Data" table.

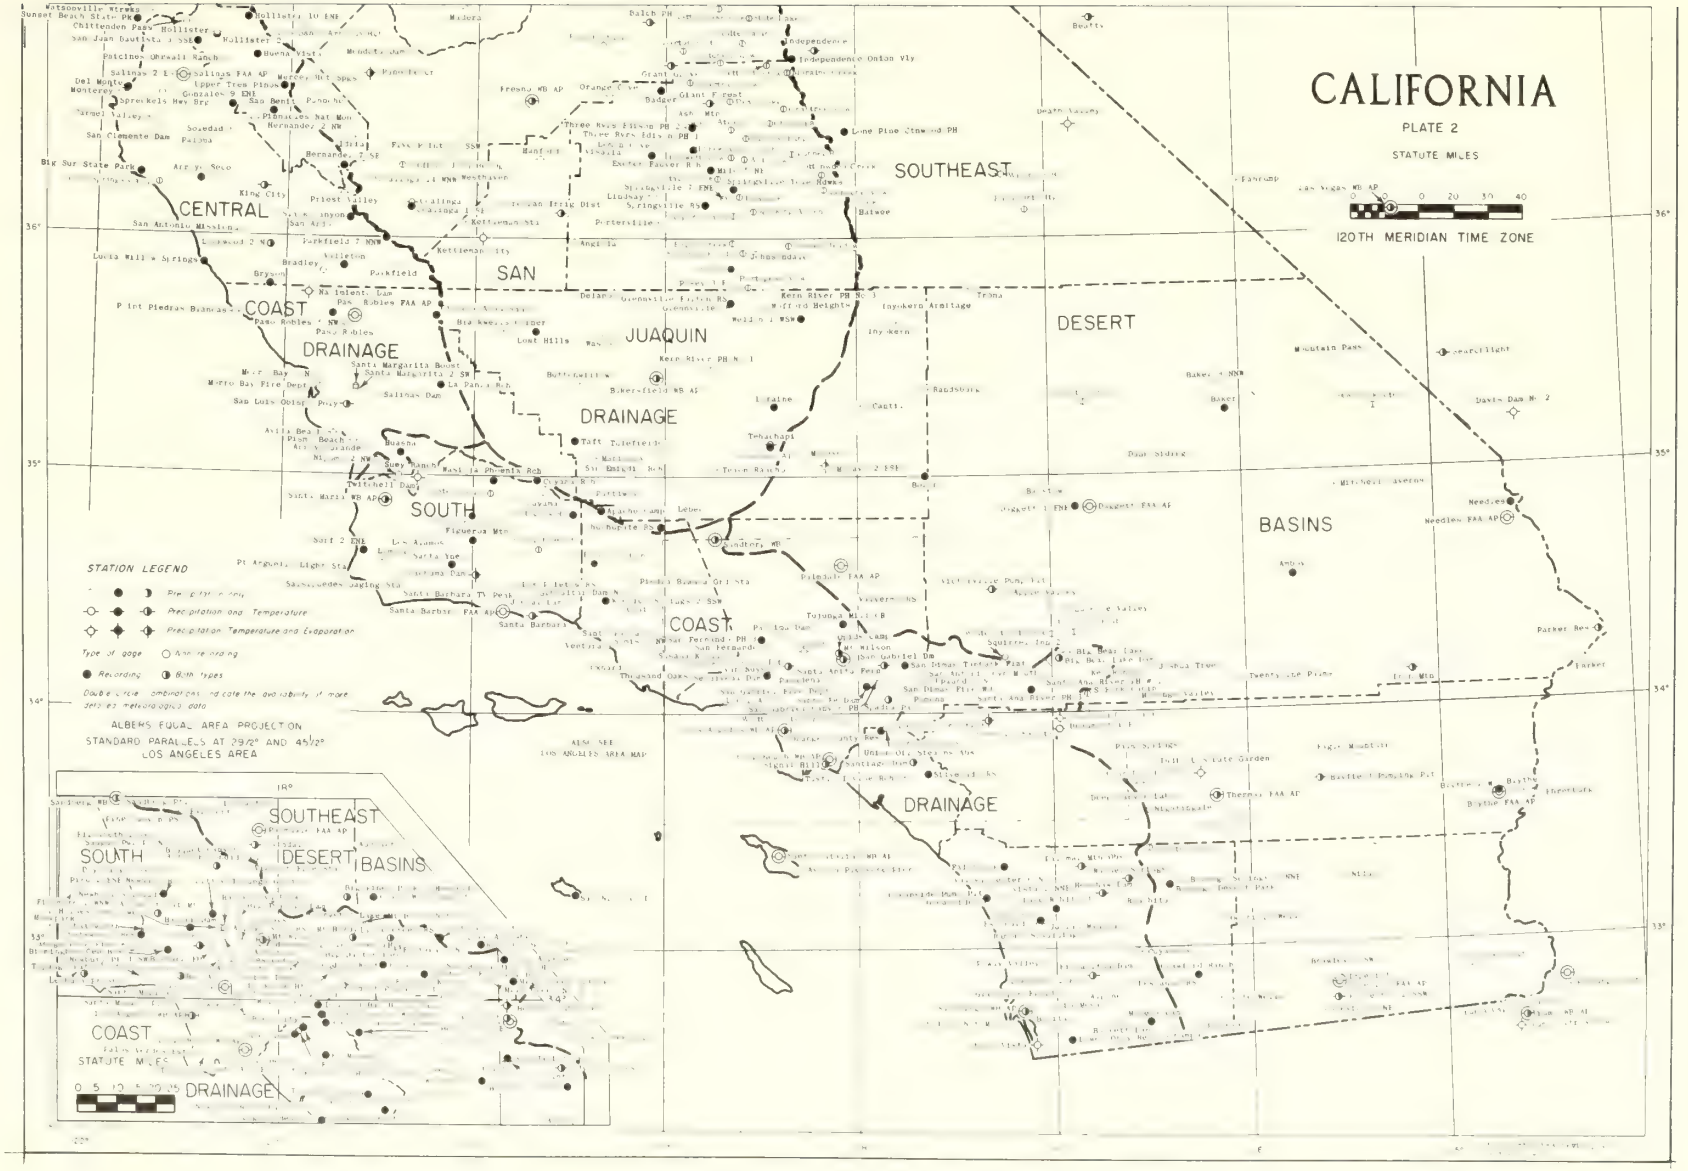
S Storage precipitation station. Precipitation measurements made at irregular intervals will be published later in 'Precipitation Data from Storage-Gage Stations" Bulletin.

SS This entry in time of observation column in Station Index means observation made near sunset.

VAR This entry in time of observation column in Station Index means variable.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.



General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price 20 cents per copy, monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

SPECIAL WEATHER SUMMARY

December was a month of temperature extremes. In general, the first two-thirds of the month were cold, while the last decade was warm. Most first-order stations showed monthly mean temperatures 1° to 3° below normal, with departures of 5° to 8° reported at higher elevations. Mt. Shasta City reported the coldest December since 1948 and the eighth coldest in 60 years of record. Red Bluff observed new low temperatures for the date on the 16th and 17th. Blue Canyon experienced a new low temperature record for December. The minimum on the 14th set a new low record for that date at San Francisco. Fresno had the lowest mean minimum for December, and set new daily low temperature records on the 14th, 15th, 16th, and 17th. At Santa Maria the minimum on the 14th was the lowest ever recorded in December, and equalled the low for any month. Los Angeles City reported the coldest December since 1951, and the Airport set a new minimum temperature record for December.

A pronounced temperature rise during the last 10 days of the month was most evident in the northern part of the State. Red Bluff set new maximum records for the date on the 23d, 24th, 25th, 26th, and 27th, and equalled the record on the 29th and 30th. Sacramento set a new high temperature record for December on the 28th and new records for the dates on the 26th, 28th, and 29th. New high temperature readings were marked up in San Francisco on the 25th, 26th, 28th, and 29th.

Over most of the State precipitation was less than normal. At Mt. Shasta City, though precipitation was essentially normal, the cold temperatures associated with it resulted in the greatest snowfall since 1952. While San Francisco's precipitation for the month was deficient, the shower on the 17th set new records for 5 minutes (0.29) and 10 minutes (0.31). At San Diego a trace of snow was reported at the Weather Bureau office, for only the second time in the records.

The sea level pressure at Oakland reached 30.62 inches, to equal the all-time high for that station. (A pressure of 30.64 inches was recorded at San Francisco in 1902, and even higher pressure probably occurred in 1883.) San Francisco reported the second greatest percentage of possible sunshine for December.

From the 12th through the 17th strong winds and stormy weather were reported over the State. Damage was estimated to be more than a million dollars. Buildings were damaged; trees were blown down; utilities were disrupted; and greenhouses and billboards were destroyed. Boats were damaged or sunk in the Lake Tahoe area. Heavy snows associated with these storm systems closed highways and isolated communities in the mountains and on the high desert. Low temperatures in the wake of the winds damaged citrus, and the wind itself caused some damage to citrus and avocade crops.

One person was killed when wind toppled a stack of packing boxes. A woman was frozen to death while walking to her home after her car stalled in snow. Two persons drowned in a flooded drainage structure.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Environmental Science Services Administration State Climatologist, 552 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you. Additional precipitation data are contained in "HOURLY PRECIPITATION DATA CALIFORNIA" and "Storage-Gage Precipitation Data for Western United States".

DIMENSIONAL UNITS Unless otherwise indicated, dimensional units used in this bulletin are Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F. In 'Supplemental Data' table directions entered in figures are tens of degrees. Resultant wind is the vector sum of wind directions and speeds divided by the number of observations.

OBSERVATION TIME The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 6:00 a.m., P.S.T., except Lemoore WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 5:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the 'Extremes' table, Daily Precipitation" table, "Daily Temperature' table, 'Evaporation and Wind" table, and snowfall in the 'Snowfall and Snow on Ground' table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the 'Evaporation and Wind" table. Max and Min in 'Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the 'Snowfall and Snow on Ground' table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL Entries of snowfall in the 'Climatological Data' table, the 'Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- No record in the "Supplemental Data' table, "Daily Precipitation' table, 'Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

No record in the 'Climatological Data' table and the "Daily Temperature' table is indicated by no entry.

. And also on an earlier late or dates

** Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.

* Amount included in following measurement, time distribution unknown.

Gage is equipped with a windshield.

B Adjusted to a full month.

E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing. If average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

r Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

T Trace, an amount too small to measure

V Includes total for previous month

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

AR This entry in time of observation column in Station Index means after rain.

(Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in the "Hourly Precipitation Data' bulletin. If daily amounts are published in 'Climatological Data" bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the "Hourly Precipitation Data' bulletin.

C Soil Temperature' table.

H 'Snowfall and Snow on Ground' table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.

J Supplemental Data' table.

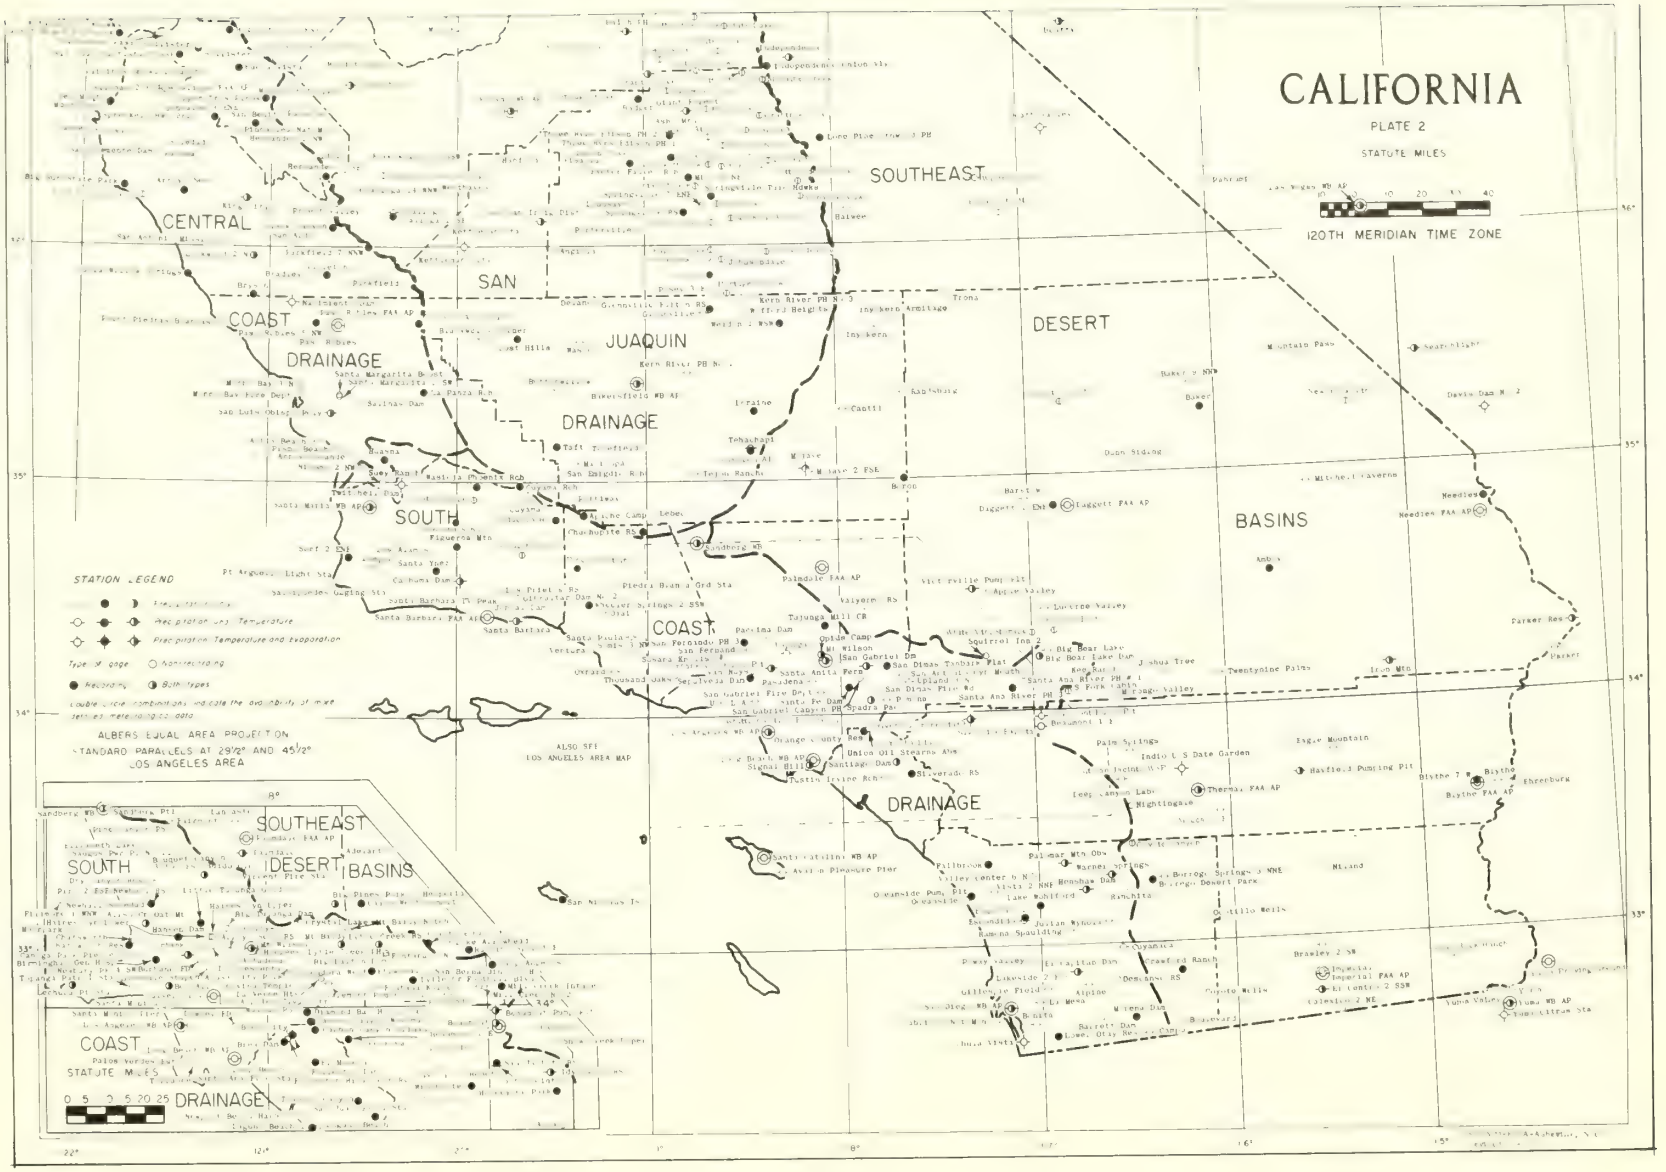
N Storage precipitation station. Precipitation measurements, made at irregular intervals will be published later in 'Precipitation Data from Storage-Gage Stations' Bulletin.

SS This entry in time of observation column in Station Index means observation made near sunset.

VAR This entry in time of observation column in Station Index means variable.

Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.



General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price 20 cents per copy, monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Additional information regarding the climate of California may be obtained by writing to the Environmental Science Services Administration State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you. Additional precipitation data are contained in "HOURLY PRECIPITATION DATA CALIFORNIA" and "Storage-Gage Precipitation Data for Western United States".

DIMENSIONAL UNITS. Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the Evaporation and Wind table. Max and Min in Evaporation and Wind table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

NORMALS for all stations are climatological normals based on the period 1931-1960. "DEP" in Table 4 refers to departures from long-term means based on periods varying from 10 to 29 years which are used in place of normals. Except $ indicates standard normals used for Newark departures.

DIVISIONS, as used in this publication, became effective with data for January 1941.

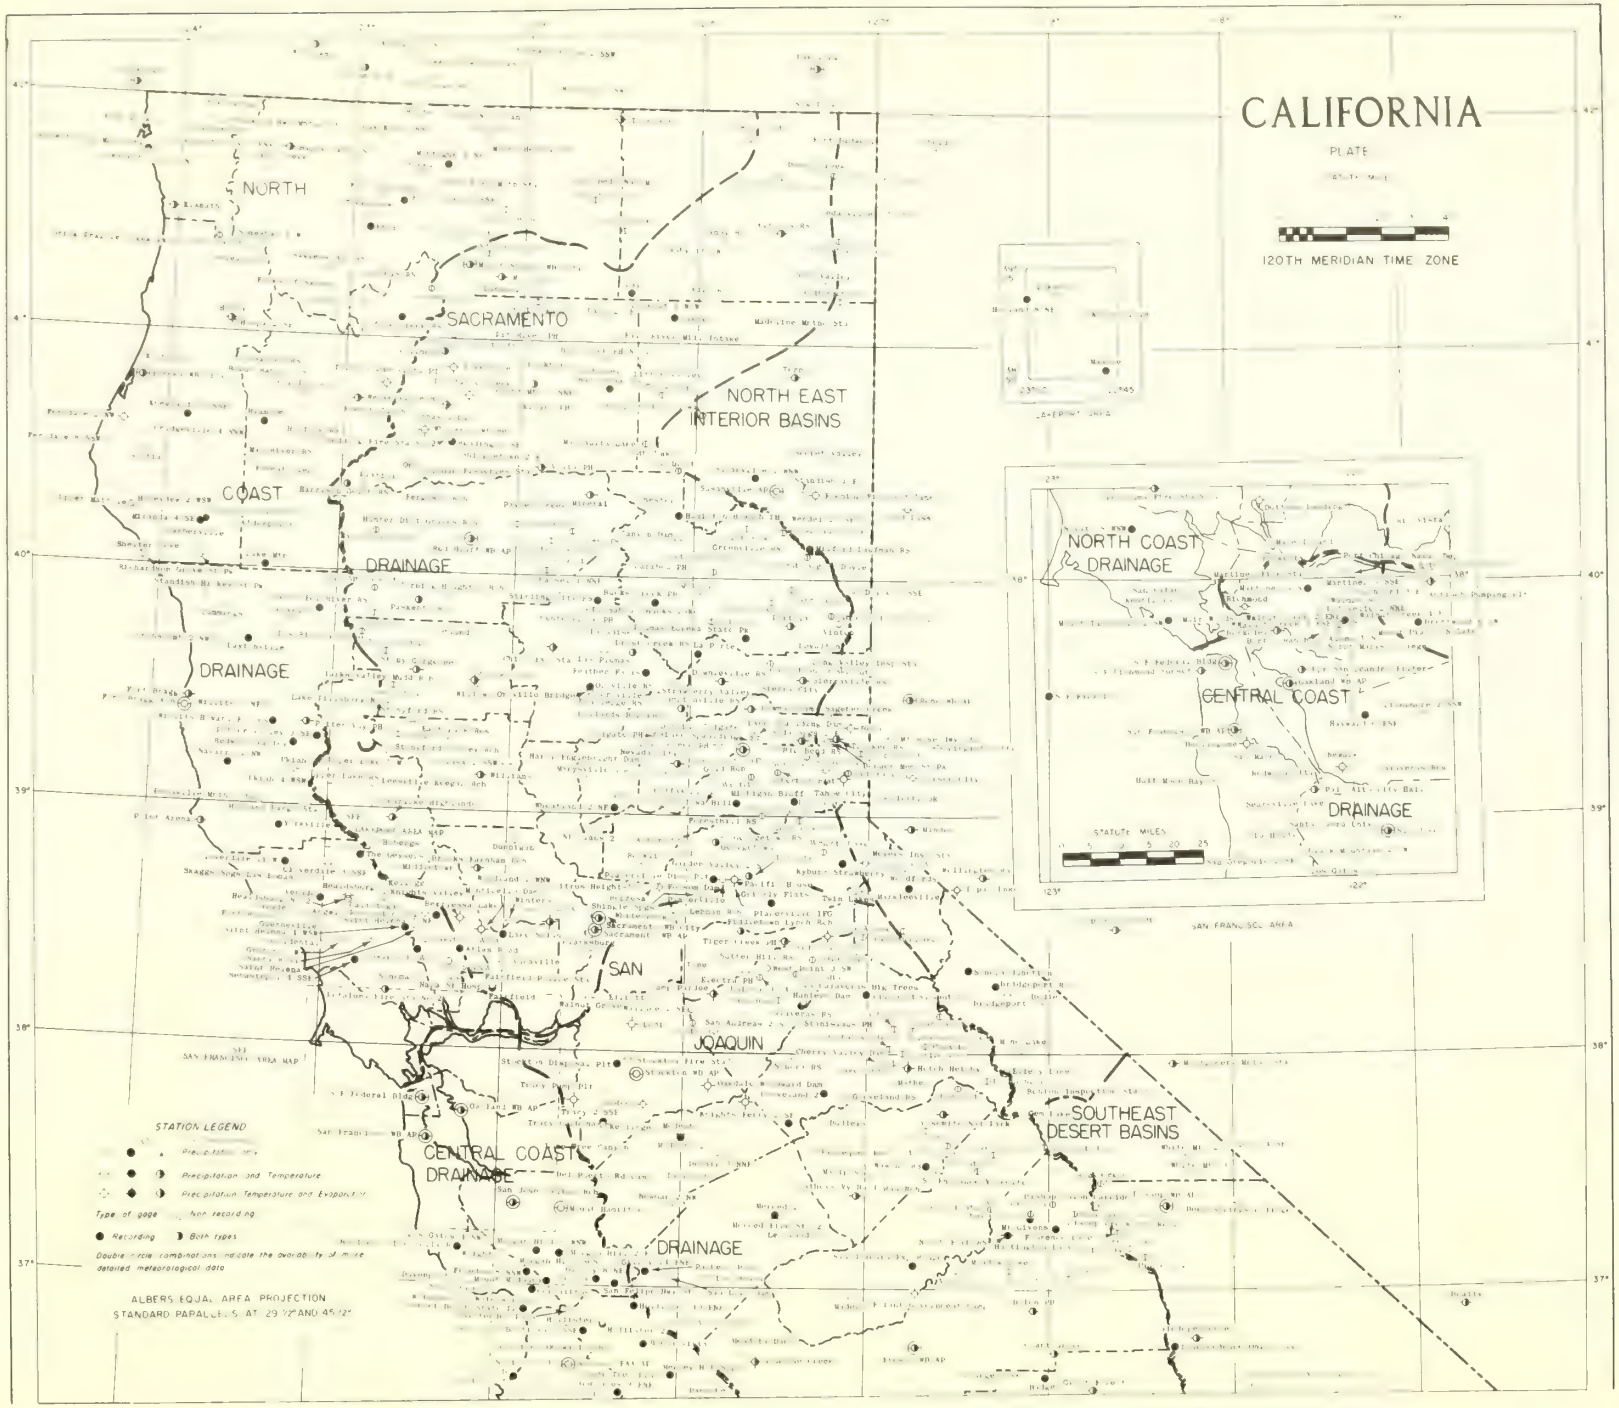
STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

DELAYED DATA AND CORRECTIONS will be carried in the June and December issues of Climatological Data.

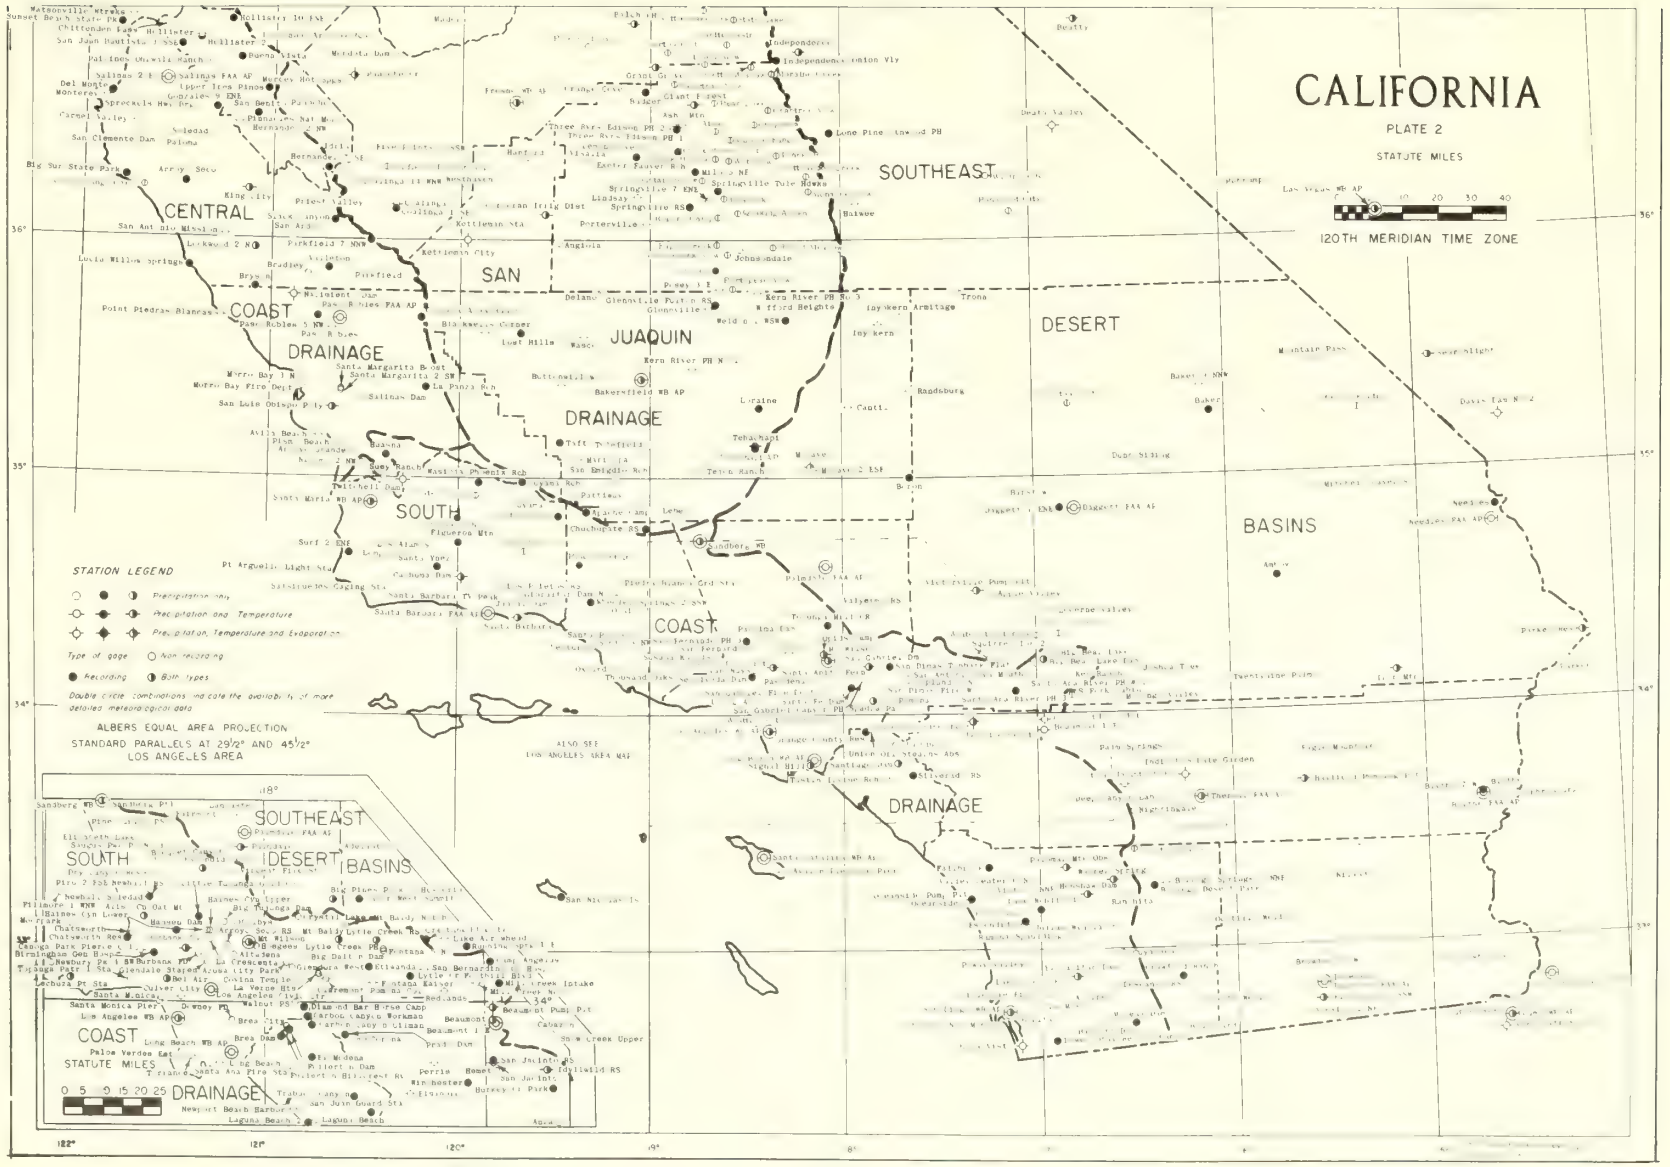
IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- \- No record.
- \+ Also on earlier date (dates) or months.
- * Amount included in following measurement.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- E Amount is wholly or partially estimated.
- M One or more days record missing; if average value is entered, less than 10 days record is missing. See monthly Climatological Data for detailed daily record.
- R Amounts from recording gage. (The amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.
- V Includes total for previous month. V in annual column means total is for a two-year period.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:



- # Thermometers are generally exposed in a shelter located a few feet above sod covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
- C Data for recording rain gage stations processed for special purposes and published in Hourly Precipitation Data. Length of record for recorder-only stations may be found in the annual issue of Hourly Precipitation Data.
- G Soil temperatures published.
- S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published later in "Precipitation Data from Storage-Gage Stations" Bulletin.



Years of record as shown in the Station Index are approximate since gaps in records may not have been considered in arriving at the totals shown.

Information concerning the history of changes in location, elevations, exposures, etc., of substations through 1957 may be found in the publication "Substation History" for this State. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402, for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, obtained as indicated above, price 15 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

CALIFORNIA - JANUARY 1968

SPECIAL WEATHER SUMMARY

Temperatures for January averaged below normal on the northern and central coasts, the interior valley, and the northeast interior, but they were well above normal elsewhere. In general, the first decade of the month and the last 5 days of the month were cooler than normal, while the remaining 15 days were warm for the season. The magnitude of the swing is suggested by data from Blue Canyon; during the 5 days from the 20th through the 24th temperatures averaged 18° above normal, while the period from the 27th through the 31st averaged more than 13° below normal.

Mt. Shasta City measured 4° on the 11th, the coldest reading there since February of 1962. Red Bluff set new daily records for cold on the 4th and 5th, and observed the coldest temperature ever experienced at the airport in 24 years of record. The maximum at Fresno on the 8th was the lowest ever recorded on that date. At the other extreme were new high temperature records set for the dates on the 7th and 8th at Sacramento and on the 22d at San Francisco. During the warm weather Los Angeles reported relative humidity dropping below 20 percent on 12 days.

Precipitation for the month was greater than normal on the north coast, in the northern mountains, and over the San Francisco Bay and the Delta regions. Elsewhere, totals were lighter than usual. Mt. Shasta pointed out that though the seasonal precipitation to date is below normal, they have already received 44 inches more snow than the normal for the entire season. San Francisco had the wettest January since 1956, but Long Beach observed the least precipitation since 1963 and the greatest number of clear days since 1957. San Diego reported sunshine 14 percent greater than normal.

Heavy precipitation on the 9th and 10th resulted in local flooding in the San Francisco Bay area, and temporarily closed highways over the Sierras. A waterspout was reported southwest of Crescent City on the 13th. Slides, as a result of heavy rains, blocked highways on the north coast on the 14th and 15th. Precipitation on the 29th and 30th caused flooding in the San Jose area and closed the Feather River Route to both motor and rail traffic.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Environmental Science Services Administration State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you. Additional precipitation data are contained in "HOURLY PRECIPITATION DATA CALIFORNIA" and "Storage-Gage Precipitation Data for Western United States".

DIMENSIONAL UNITS: Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F. In "Supplemental Data" table directions entered in figures are tens of degrees. Resultant wind is the vector sum of wind directions and speeds divided by the number of observations.

OBSERVATION TIME: The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on the ground in the "Snowfall and Snow on Ground" table is at observation time for all except weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL: Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES: Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.

+ And also on an earlier date or dates.

++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.

• Amount included in following measurement, time distribution unknown.

// Gage is equipped with a windshield.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing, if average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

T Trace, an amount too small to measure.

V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

AR This entry in time of observation column in Station Index means after rain

C Recording Rain Gage Station. Hourly precipitation values are recorded for special purposes, and are published later in the "Hourly Precipitation Data" bulletin. If daily amounts are published in "Climatological Data" bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the 'Hourly Precipitation Data' bulletin.

G "Soil Temperature" table.

H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.

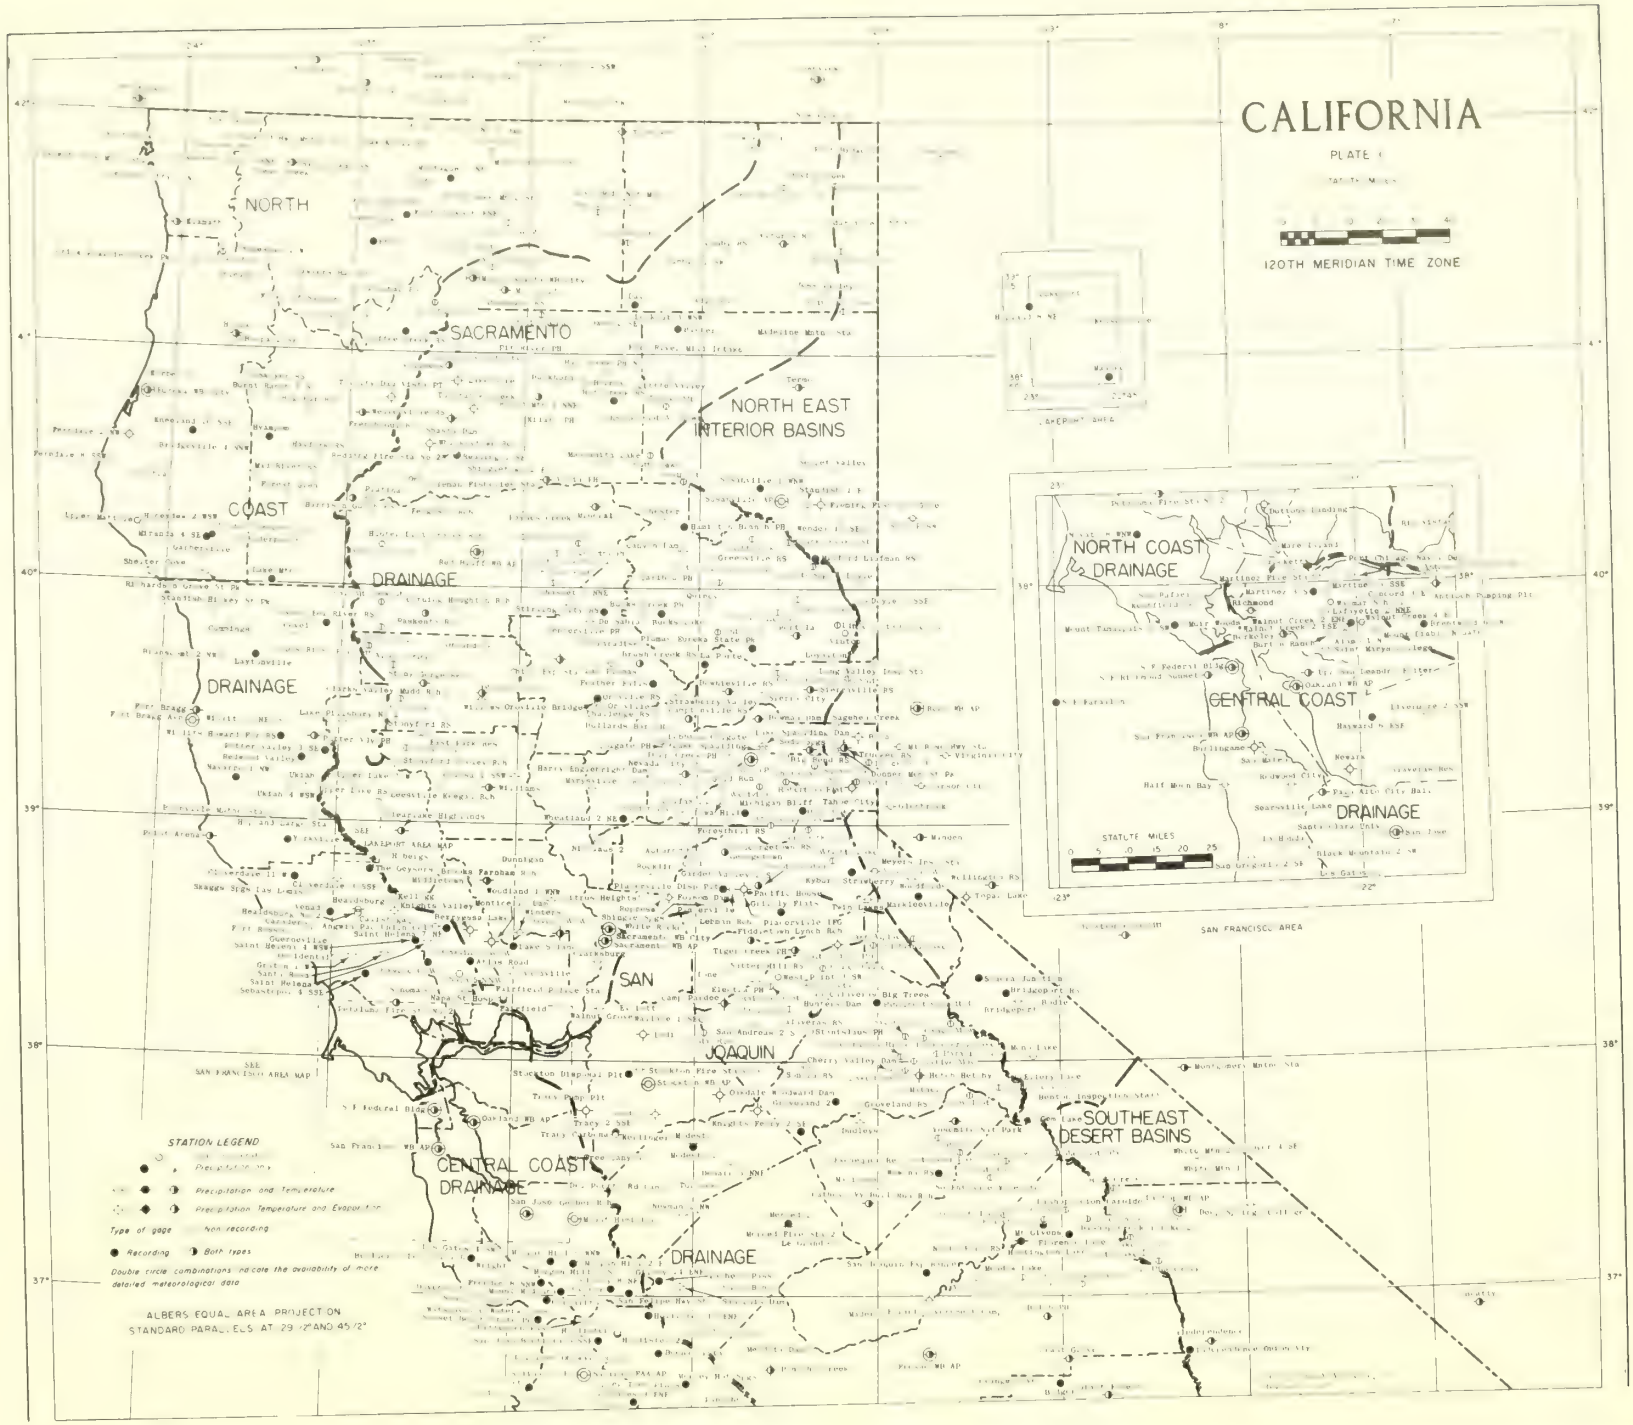
J "Supplemental Data" table.

S Storage precipitation station. Precipitation measurements, made at irregular intervals will be published later in 'Precipitation Data from Storage-Gage Stations" Bulletin.

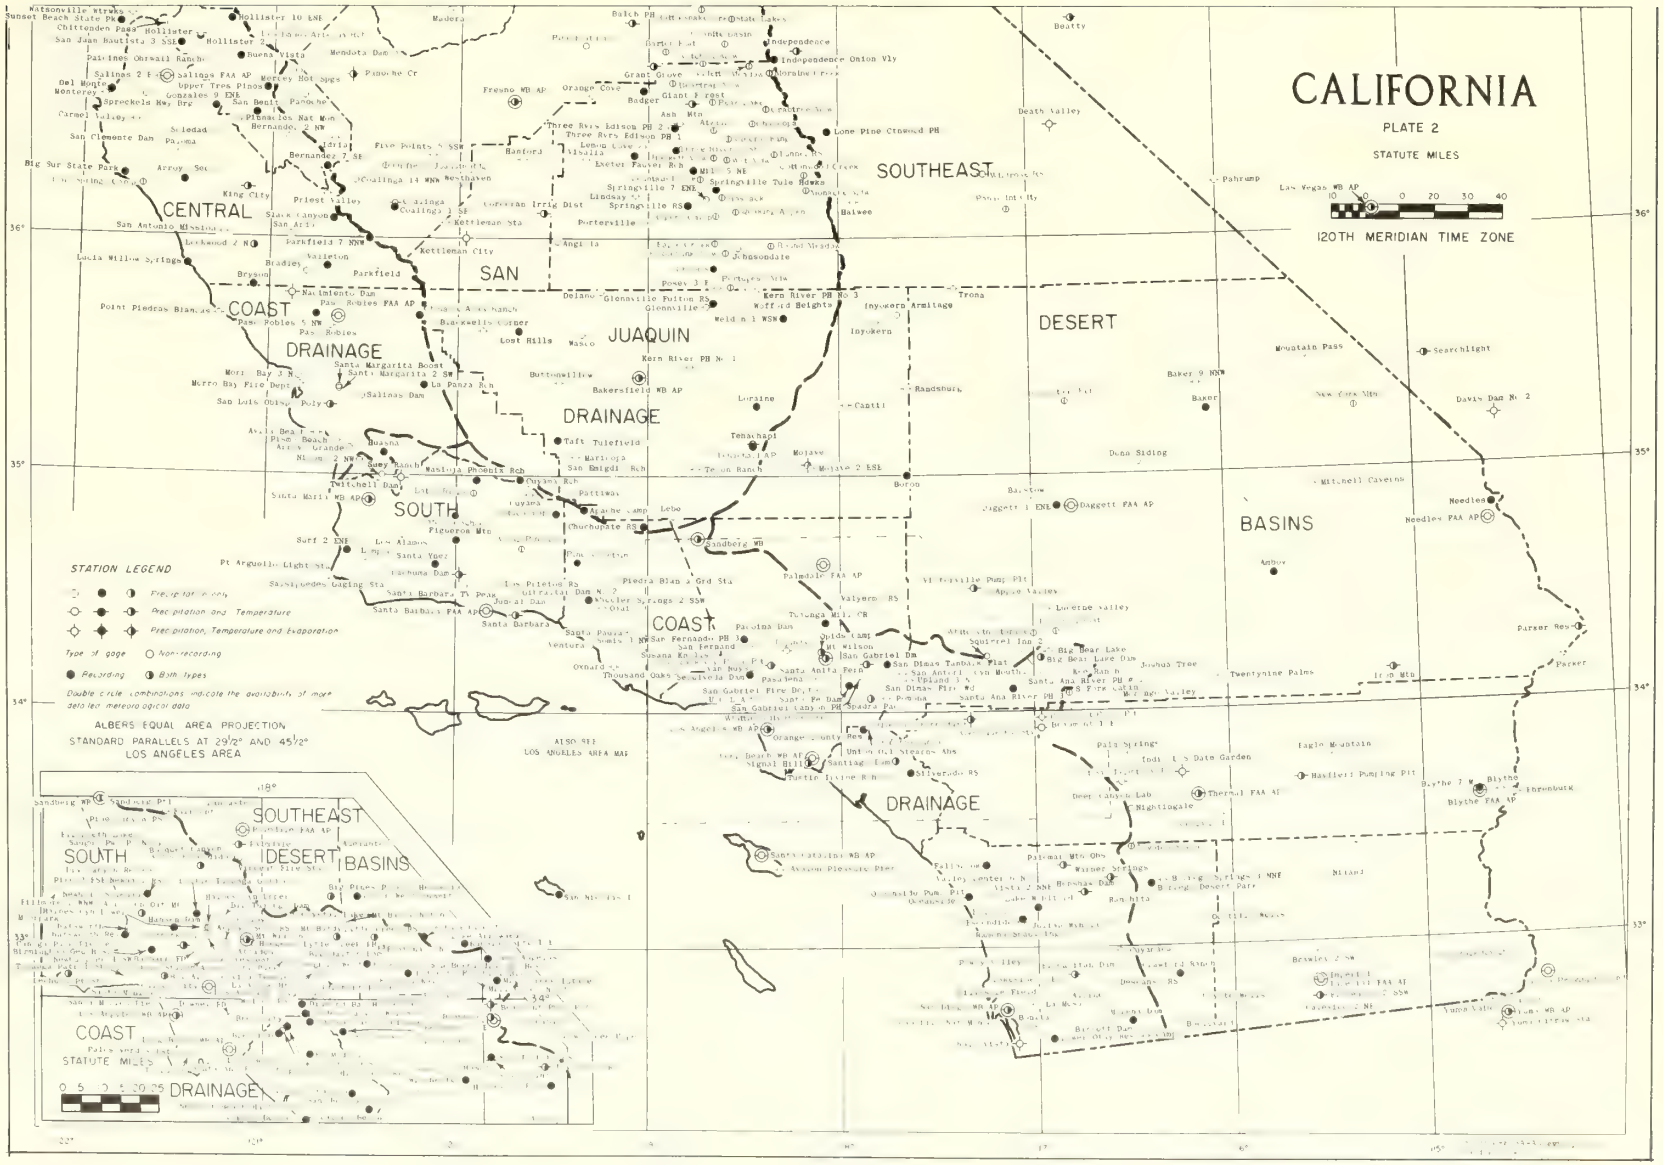
SS This entry in time of observation column in Station Index means observation made near sunset.

VAR This entry in time of observation column in Station Index means variable.

Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.



Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.



General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price: 20 cents per copy, monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

CALIFORNIA - FEBRUARY 1968

SPECIAL WEATHER SUMMARY

Temperatures averaged much above normal throughout the State, with departures of 3.5° to 5° along the coast and 5° to 6.5° in the interior. Bakersfield reported the warmest February of record, while the second highest reading was listed at Sacramento, Santa Maria, Los Angeles City, and Long Beach. Eureka, San Francisco City, Stockton, and Fresno reported the third warmest February of record. San Diego indicated they had the largest positive anomaly for any month since September 1963. Much of the warm average can be credited to high minima; mean minimum values for the month set new high records at Sacramento, Fresno, Santa Maria, Los Angeles City, and Stockton, and equalled the previous record at Long Beach. Average minimums were the second highest of record at San Francisco Airport, Oakland, Bishop, and Los Angeles Airport.

That the month was consistently warm is indicated by the fact that first order stations in Southern California reported only 1 day or less with mean temperatures below normal, while over central and northern California there were only 1 to 4 days during the month with negative departures. Red Bluff pointed out that for 8 consecutive days the minimum remained at 50° or higher, and for 13 consecutive days the minimum averaged 51°, both setting new records.

Precipitation was well below normal except locally in the northern Sierras and the Cascades. In general, from the San Francisco Bay northward precipitation amounted to 50 percent or more of normal; Southern California received less than 20 percent, with Bishop reporting only 3 percent of normal.

No major storm damage was reported during the month.
